

STOCO®  
COMPOSITE FLOORING SYSTEM

*Terrazzo Catalog*

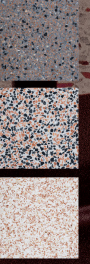

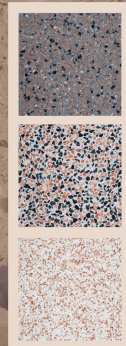

## What is Terrazzo?

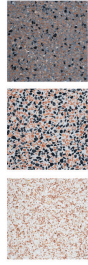

Terrazzo is a composite flooring system consisting of marble, granite, onyx, glass pieces and aggregate cement.

It is poured and cured in site to produce a smooth hard surface finish.

Terrazzo is a special floor covering, which is mainly made of natural products and is subject to slight tonal differences, and it also has versatile usage areas such as countertops, interior decorations, tables, panels, floors and steps.

In order to create the desired color and pattern, natural stones are formed by combining PC CEM-52.5 white cement, iron oxide pigments and pozzolanic additives.
